The UW BioSTEP Scholars Program provides research opportunities for undergraduate students who are:

- Looking to gain hands-on research experience in cellular & molecular pharmacology and/or microbiology
- Interested in applying for graduate-level research programs in the future

UW BioSTEP focuses on engaging undergraduate students from Pacific Northwest Tribal Nations and other systemically marginalized communities in biomedical research at the University of Washington.

BioSTEP Scholars will spend 10-weeks in a laboratory-setting working on important biomedical questions, will be exposed to diverse career options in biomedical research, and will present their findings at the end of the summer program at the UW Undergraduate Research Symposium.

Participants benefit from intensive research experience and close mentorship. Participants will receive a generous stipend, food allowance, and paid on-campus accommodations.

Eligibility Criteria

- Currently enrolled in an undergraduate program within Washington state
- Interest in a research career in biomedical sciences

Apply by May 8, 2023
